REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: applicant argues the following:

In the Office Action the Examiner indicated that Ogden teaches that two blowers are used as opposed to the claimed three and that the addition of a third blower to the two blowers in the system of Ogden is considered to be obvious. However, Applicant submits that Ogden does not teach or suggest an embodiment including the combination of blowers in both parallel and series. Rather, Ogden discloses that the blowers are present either in a parallel or series configuration. Applicant submits that it may be obvious from Ogden to add another blower in parallel to the parallel configuration or another blower in series to the series configuration, but it would not be obvious from Ogden to combine the blowers in both a parallel and series configuration.

In the present claims, two blowers are connected in parallel and a third blower is connected in series which results in both an increase in air flow through the assembly and an increase in water lift. As described on page 15, lines 16-17 of the present application, the vacuum assembly of the present invention develops 200 inches of water lift capability and 230 cfm of vacuum. In contrast, Ogden teach a water lift of 170 inches of water and an air flow of 90 cfm for two blowers in series and a water lift of 125 inches of water lift and an air flow of 180 cfm for two blowers in parallel, (col. 7, lines 60-65). Accordingly, even if an additional blower was added in either series or parallel to Ogden the results of the present invention would not be obtained. Applicant submits it is unexpected that connecting two blowers in parallel and a third blower in series both increase air flow through the assembly and increase water lift to the amount achieved by the present invention. Moreover, Applicant submits that the degree of benefit is unexpected since the results are much improved over both of the disclosed Ogden configurations. Further, Applicant submits that in the past 42 years of carpet cleaning, no one has tried this configuration as noted in the Declaration of Alex Martynovych submitted herewith.

Furthermore, even if another blower was added to the system of Ogden, Ogden would not achieve the results of the present invention because Ogden does not teach or suggest a waste return line having a diameter of 2 inches as defined by new claim 20. Applicant submits that the waste return line comprises the vacuum hose and wand and it is unexpected to use a 2 inch diameter vacuum hose and a 2 inch diameter wand in combination with two blowers in parallel and a blower in series to provide long distance cleaning up to 800 feet. As noted in the Declaration of Alex Martynovych, the Ogden system is commercially available and this system include a $1\frac{1}{2}$ inch vacuum hose and $1\frac{1}{2}$ diameter wand which

Application/Control Number: 10/693,791

constrict the air flow and water lift in the cleaning process. Accordingly, even if Ogden used the blower assembly configuration of the present invention they would not achieve the same results as the present invention because they do not teach or suggest the use of a 2 inch diameter vacuum hose and a 2 inch diameter wand in combination with two blowers in parallel and a blower in series.

These arguments are persuasive.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
